Process Improvement Report

Process Gap Analysis and Proposed Task-Management Framework

Procurement Department & Operations / Business Research Department

Prepared by:	Alabi Ayomide Gladys
Role:	Business Analyst / Procurement Officer
Submitted to:	Management, AbleGod System Logistics
Date:	25 September 2026
Subject:	Identified operational pain points in the Procurement and Operations/Business Research departments, with proposed process improvements

1. Executive Summary

The management should approve the proposed task-mapping framework, mandatory staff portal utilization, and standardised reporting structure, as they close the operational gaps found in Procurement and Operations & Business Research at low cost with minimal disruption.

This follows from three findings: neither department works to a predefined daily task structure, leaving output hard to plan or track; Operations & Business Research has focused almost entirely on research, neglecting its operations mandate, with research tasks resembling academic assignments rather than real business deliverables; and there is no standard way to document or report completed work to management.

Implementing these changes benefits both the company and its interns. For the company, it means clearer visibility into daily output, better-documented work for future business analysis, and a fully functional operations arm rather than one running at half capacity. For interns, it means well-defined daily direction, exposure to both operations and research through rotation, and a documented portfolio of real business work they can reference beyond the internship.

2. Elicitation

Findings were gathered through direct observation by the Team Lead for the Procurement Department, and separately observed the Operations & Business Research Department as a team member within it. Both observations covered day-to-day task assignment, execution, and reporting practices.

These findings were then validated through meetings with management. All elicitation took place during the first month of the internship.

3. Problem statements: Identified Pain Points

3.1 Procurement Department

- There is no predefined structure of daily tasks. Work is not planned or scheduled in advance, which leaves staff without clear daily direction and makes it difficult to meet daily requirements, track output or productivity on a day-to-day basis.

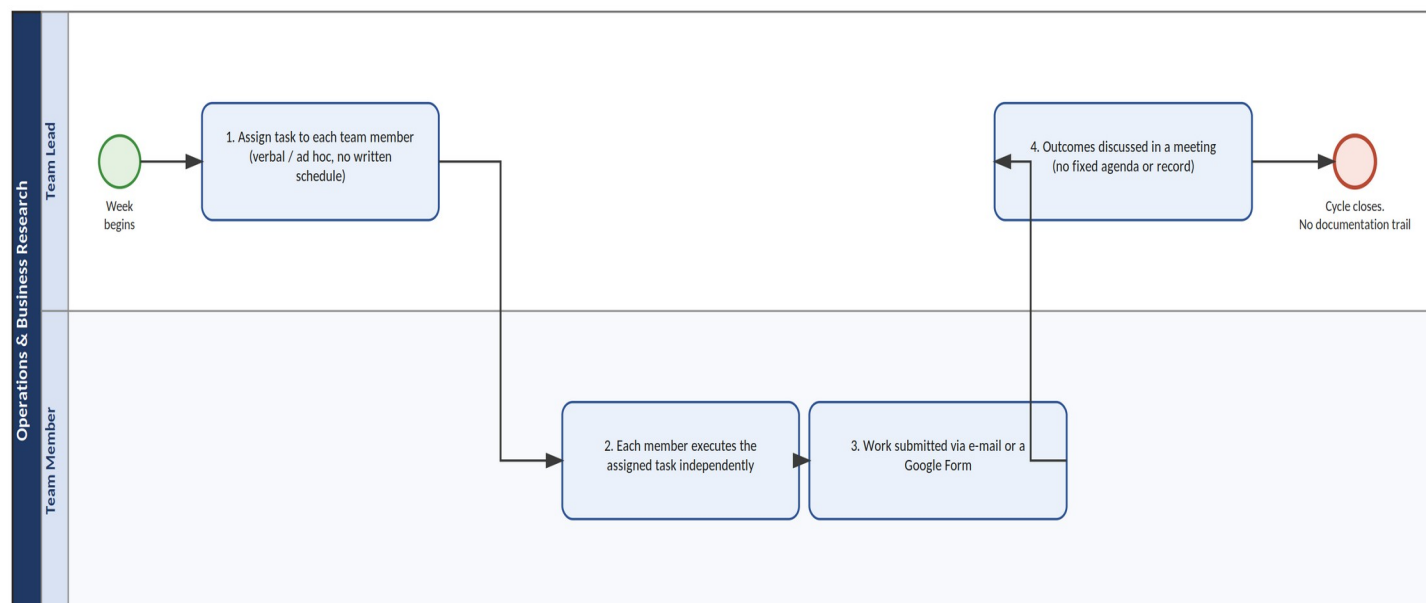

3.2 Operations & Business Research Department

- There is likewise no predefined structure of daily tasks for this department.
- The business research tasks assigned so far resemble academic assignments rather than tasks tied to real business needs or outcomes.
- Since the start of the internship, the department's activity has been concentrated almost entirely on business research, while the operations function which is meant to oversee and support the day-to-day running of the business has been neglected. This means one half of the department's core mandate is not being fulfilled.

3.3 figure 1: Current “As-Is” Process (Operations & Business Research)

Current (As-Is) Process: Operations & Business Research Department

Informal task cycle, no digital tracking, no standard reporting format

4. Proposed Solutions

4.1 Pre-mapped daily tasks

Introduce a pre-mapped schedule of real, business-relevant tasks for each day of the week, assigned per team member. Tasks can be communicated each morning, or issued in full at the start of each week. In either case, all tasks should be reflected on the staff portal so that assignments are visible, trackable, and consistent for every team member and for management.

4.2 Activate the Operations function

Make the operations side of the Operations & Business Research department fully functional. Interns should be properly oriented on how operations work is to be carried out and reported on each business day, so that the department begins to fulfil its full mandate rather than focusing on research alone.

4.3 Cross-departmental rotation

Divide and rotate interns between the Operations and Business Research functions on a weekly basis (for example, an intern working in Operations in one week moves to Business Research the following week). This builds well-rounded skill sets and ensures both functions remain adequately staffed and understood by the full team.

4.4 Documentation and portfolio building

Train interns on how to properly document their tasks and outcomes as they go. This supports individual portfolio building and ensures that useful work is captured in a form that can be referenced later, both by the intern and by the company.

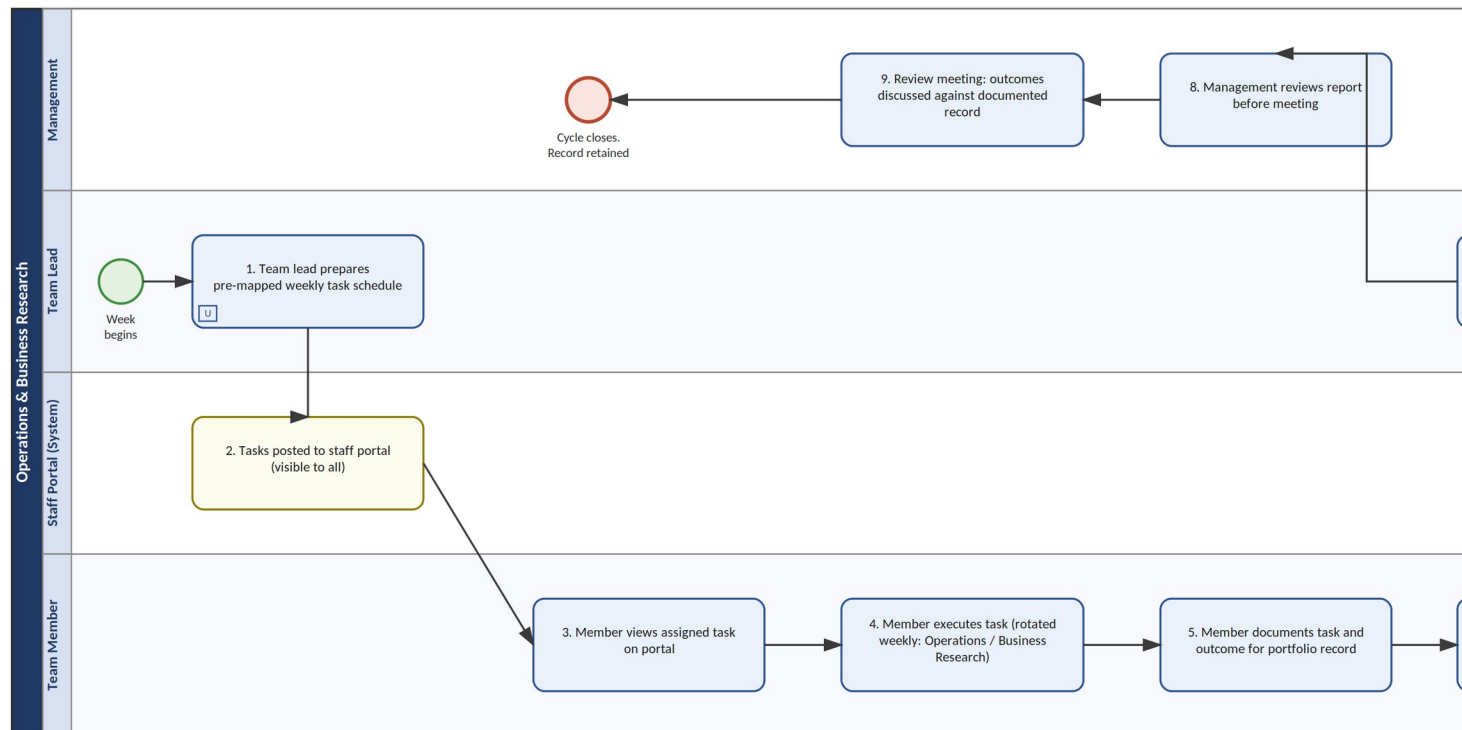

4.5 Standardised written reports from team leads

All team leads should consistently produce written reports (e.g., Google Docs or PowerPoint) submitted to management for the company's documentation, future business analysis, and process improvement. These reports should be submitted on or before the start of each review meeting, so that management has time to review them before discussion.

Future (To-Be) Process: Operations & Business Research Department

Pre-mapped tasks, portal visibility, documentation, rotation, and standardised reporting

6. Summary: Problems and Proposed Solutions

Identified Problem	Proposed Solution
No predefined daily tasks in Procurement or Operations & Business Research	Pre-mapped daily/weekly tasks for each team member, visible on the staff portal
Business research tasks feel like academic assignments, not real business work	Tasks reframed and mapped as genuine business deliverables tied to daily/weekly planning
Operations function of the department is neglected	Operations made fully functional, with interns oriented on daily execution and reporting
Interns gain narrow exposure to only one function	Weekly rotation of interns between Operations and Business Research
No structured documentation of completed work	Interns trained to document tasks for portfolio and organisational record
No standard reporting to management	Team leads submit written reports before every review meeting

7. Recommended Next Steps

1. Management review and approval of the proposed task-mapping structure for both departments.
 2. Confirmation of the staff portal as the central channel for daily/weekly task visibility.
 3. A short orientation session for interns on the operations workflow and documentation standards.
 4. Definition of the intern rotation schedule between Operations and Business Research.
 5. Agreement on the standard format and submission timeline for team leads' written reports.
